

FLEXIBLE FINANCING FOR FARMERS IMPLEMENTING CLIMATE RESILIENCY AND ENERGY SOLUTIONS

New Hampshire Community Loan Fund recognizes your farm business faces a disproportionate burden of climate impacts. From longer growing seasons; shorter, warmer winters; increased intensity of precipitation events with intermittent periods of drought; and increased pressure from pests, invasive weeds, and pathogens.

The Community Loan Fund offers creative flexible financing solutions to meet your needs to implement practices and projects for climate resiliency and energy solutions.

We work with farmers and technical assistance providers on priorities where the greatest potential for change lies in the context of changing weather patterns. We recognize practices have numerous co-benefits that may relate directly to climate mitigation or adaptation.

- Soil Management Practices – reduced tillage, nutrient management, etc.
- Solar energy projects – energy production, agrivoltaics, etc.
- Adaptive Measures – controlled agriculture, water management, etc.

Here's how we can assist your business:

- Flexible financing for equipment
- working capital, bridge loans,
- soil and water management practices
- Grant writing and project development
- and more
